Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3

1 2 3

4 5 6

7 8 9

Output: Sum of the main diagonal: 15

Sum of the secondary diagonal: 15

Answer

```
import java.util.Scanner;
class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int N = sc.nextInt();
        int[][] arr = new int[N][N];
        for(int i=0;i<N;i++){
            for(int j=0;j<N;j++){
                arr[i][j] = sc.nextInt();
            }
        }
        int maindiaSum = 0, secondarydiaSum = 0;
        for(int i=0;i<N;i++){
            maindiaSum += arr[i][i];
            secondarydiaSum += arr[i][N-1-i];
        }
        System.out.println("Sum of the main diagonal: " + maindiaSum);
        System.out.println("Sum of the secondary diagonal: " + secondarydiaSum);
    }
}
```

}
}
Status : Correct

Marks : 10/10
