Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces. The username must be at least 5 characters long.

Implement a custom exception, `InvalidUsernameException`, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]".

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John

Output: Invalid Username: Username must be at least 5 characters long

Answer

```
import java.util.Scanner;
```

```
class InvalidUsernameException extends Exception {  
    public InvalidUsernameException(String message) {  
        super(message);  
    }  
}
```

```
public class Main {
```

```
    public static void validateUsername(String username) throws  
    InvalidUsernameException {
```

```
        if (username.length() < 5) {  
            throw new InvalidUsernameException("Username must be at least 5  
characters long");  
        }
```

```
        if (username.contains(" ")) {  
            throw new InvalidUsernameException("Username cannot contain  
spaces");  
        }
```

```
}  
}  
  
public static void main(String[] args) {  
    Scanner scanner = new Scanner(System.in);  
    String username = scanner.nextLine();  
  
    try {  
        validateUsername(username);  
        System.out.println("Username is valid: " + username);  
    } catch (InvalidUsernameException e) {  
        System.out.println("Invalid Username: " + e.getMessage());  
    } catch (Exception e) {  
        System.out.println("An unexpected error occurred during validation.");  
    } finally {  
        scanner.close();  
    }  
}  
}
```

Status : Correct

Marks : 10/10
